

# About Seer Technologies

---

In 2013 (10 years after founding), we've attained ISO 9001:2008 (Quality Management System) Certification in the area of Software Development. Our Quality Policy is *Superior Customer Experience*. This mindset has allowed us to grow significantly to over 50 people mostly through referrals and word-of-mouth.

As a matter of philanthropy, we've embarked on internal projects building various applications with impact on community in mind. Among the projects we've started are community portals, apps for children with special needs, public safety and convenience, disaster preparedness, and others.

Seer is an Amazon Web Services Managed Partner.

Seer is a software company based in the Philippines focused on Mobile, Data, Web and Cloud software development, hosting and management, serving customers of various sizes and across industries.

From the time we were founded in 2003, we've been blending various disciplines covering User Experience (UX) design and software architecture with software development and systems integration to deliver delightful, reliable and great-performing systems.
